(54) MEASURING SYSTEM FOR ANALYSIS SLIDE, INFORMATION RECORDING MAGNETIC CARD AND ANALYZER

(57)Abstract:

PURPOSE: To provide an accurate system with a simple operation which allows the inputting of all pieces of information into a magnetic card pertaining to a slide measurement containing correction information per lot to perform a slide measurement based on the information.

CONSTITUTION: A magnetic card 4 is used one sheet added to each slide container (box). The magnetic card 4 has information necessary for measurement recorded, which is stationary information coded covering an amount of a spotting liquid, a measuring wavelength, a data processing system, a base calibration curve, a determination area, a display range, a display digit, a display unit and the like and varying information covering lot number for correcting changes in measured values per lot, item codes, item names, correction factors and the like. The stationary information and varying information are inputted using the magnetic card 4. This allows a user to operate an analyzer 1 simply and accurately when not only the varying information but also the stationary information changes.
